

Does the Kimi screening app validate the client's BMI?

- No, not at launch stage, but this is technology that Myriad is exploring.
- Momentum will validate insured lives' BMI, as calculated from the digital screening, with our Fastlane medical practitioner. If the medical practitioner's BMI validation differs from the digital screening result received, then we will use the medical practitioner's results as the verified results. Your LifeReturns[®] discount percentage will be adjusted accordingly. A revised LifeReturns[®] offer will be sent to you, together with the policy contract, in these specific cases.

NB: There may even be certain instances where we may waive the validation or use existing information available to us at the time of the screening, to validate the results.
